Please submit a brief note supporting the options chosen above for innovation, improvement and scalability.

Archit Rahul Patil son of the promoters has invented postpartum haemorrhage (PPH) cup which is used by doctors the exact amount of blood loss and in real-time in the event of child birth. Measuring and estimating the exact volume of blood loss in the event of childbirth is very vital in the management of postpartum hemorrhage, especially during the golden hour. More than 50 hospitals across India are using this PPH cup to save the lives of mothers, given its ability to hasten diagnosis and early medical treatment. Moreover, the device is reusable after autoclave and sterilization, and thus doesn't add to the burgeoning problem of hazardous medical waste. It helps to reduce maternal mortality and morbidity.

No

Startup Activities

Any recognition or awards received by the startup

No

What is the problem the startup is solving?

A novel way to measure and estimate the obstetric blood loss accurately in real time and help save maternal life. PPH (Postpartum Hemorrhage) is very unpredictable and every parturient woman is at risk of having PPH. PPH is all about - Predict, Prepare and Handle. It is made of medical grade silicone. Postpartum haemorrhage (PPH) is the leading cause of maternal mortality worldwide and India accounts for approximately 19 per cent of global maternal deaths, with PPH as the leading cause. About one in 100 to five in 100 women have postpartum hemorrhage and it is a globally leading cause of maternal morbidity and mortality.

Approval Name: **Registration as a Startup**

How does the startup propose to solve the problem?	The accurate estimation of blood loss is the most important key factor before the clinical signs appear and it is often underestimated in present clinical practice. Because of delay in diagnosis GOLDEN hour is missed and patients land up in a near-miss morbid condition in a state of shock which can cause the death of the mother. Timely resuscitation is a must for better survival. This idea is to eliminate the under-diagnosis and loss of the golden hour. So timely measures are taken by the treating obstetricians and team to curb maternal mortality. With the help of my mentor- parents and technical guidance, I designed the postpartum cup. Checked its feasibility and effectiveness in clinical practice. The postpartum cup works wonder in accurately estimating the postpartum obstetric blood loss. Things should start here and society should walk the talk to save maternal life.
What is the uniqueness of the solution?	Life-saving, Practical, Convenient, Healthier, Economical, Comfortable, Easy to use, and Eco friendly. It is designed, tested safe by IDRL, Pune. Used in clinical practice by 4 obstetricians over thousand of patients. They saved the precious life of mothers during childbirth due to excessive blood loss, by early recognition and prompt treatment. This simple idea of the modification of the menstrual cup is nominated by the INSPIRE award, Government of India at the national level. It was highly rated by ASME (American Society of Mechanical Engineers) It is being highly appreciated and demanded by many obstetricians to whom the project was presented as it is easy to use, accurate, reusable and eco friendly. It will revolutionize the PPH management and reduce maternal mortality rate Globally.
How does the startup generate revenue?	Manufacturing and trading of PPH Cup (postpartum haemorrhage cup) and innovation, research and development in all field of medical science and manufacture or give licenses to manufacture medical equipment's, medical devices and medical apparatus and marketing of such products either directly or indirectly. At present more than 50 hospitals across India are using this PPH cup to save the lives of mothers. This PPH Cup (device) is getting popularity world over which help increase in revenue of the Company manifold and generate employment at all level.
